## Requirements

### What do I need for my company?

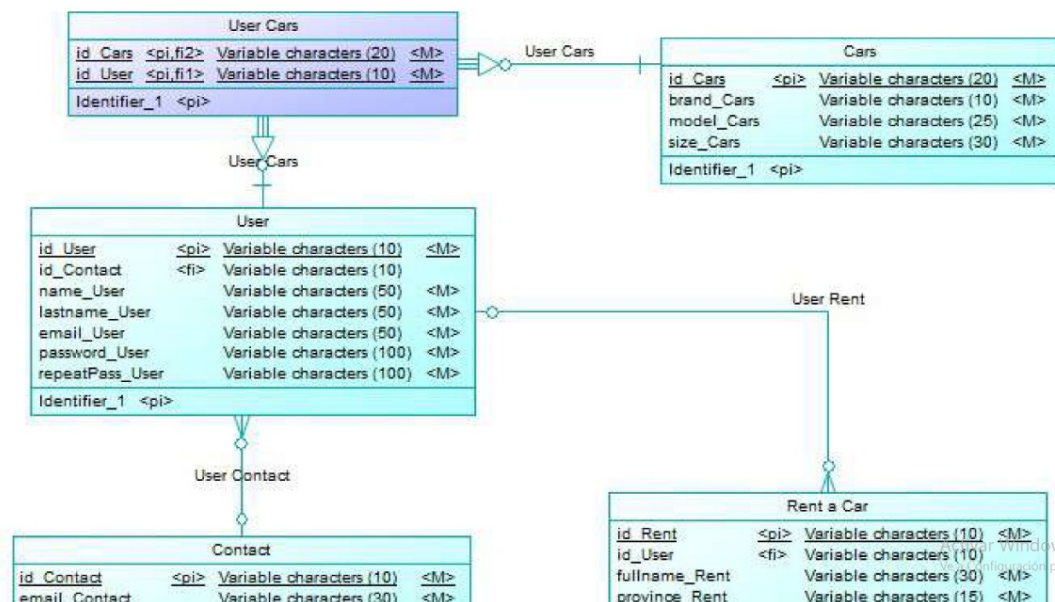

The owner of Car Rental needs to be able to show their clients their entire range of cars, in the same way to be able to show relevant information that is not redundant so that the client can choose their best option.

In this way, you also need that the process of accessing the information is not prolonged or inconvenient when searching for specific data about a vehicle and its rental record.

The Car Rental Collection features its compact sedan and full-size classic rental cars. Car Rental offers renters a variety of cars suitable for any budget and occasion. When the customer rents a compact or economy car with Car Rental, the customer can expect anything from a Nissan Versa or similar vehicle. This is your go-to collection for quality, affordable
